

An Innovatively Different Policy Administration System

SurePower Innovation™ provides you unmatched business agility because it starts as a **generic insurance processing system creation kit**. Other policy administration systems were developed for specific lines of business. Their hard-coded, line-specific business functionality makes them difficult, and sometimes impossible, to change and maintain.

SurePower Innovation is a Complete Solution that builds on the advantage of not being specific to any line of insurance business. It includes:

- » All the required tools and technology to build a state-of-the art, Web-based application
- » A treasure chest of insurance and business-specific components to use as services in a service-oriented-architecture for building blocks
- » A comprehensive framework to hold everything together in an organized, secure and standard infrastructure
- » Detailed sample products for all major property and casualty lines for use as a springboard to rapid product roll-out and project success

SurePower Innovation enables quick and accurate product delivery, fast product setup and changes, increased user efficiencies, lower operating costs, and a healthier bottom line.

SurePower Innovation is a proven solution that can enable your team to build what your company can dream.
